

(10) Extracting and Scoring responses (step 6)

↳ Evaluate performance on held out test set

Stage 3:
Evaluating
the LLM

7) Extracting
Responses

8) Qualitative
Evaluation

9) Scoring the
Responses

↳ We will extract the responses from our finetuned LLM

↑
Then, compare the model's responses w/ the correct responses in the test set

* How to measure LLM performance?

↳ After extracting the responses by our finetuned LLM, we use another LLM to automatically evaluate these responses

We will use Ollama

- ↳ Efficient Application to run LLMs on your laptop
- ↳ Llama 3.2, Phi 3, Mistral, Gemma 2, etc.
- ↳ JUST FOR inference. Assumes model is already pretrained.
Just look at the output that the model gives

* 8 BILLION Parameter Llama 3 model for evaluation
↳ Through Ollama

Stanford Alpaca website has a 52k dataset publicly available; can be used to improve AI mediating performance (such more data)
