

Data loaders in Instruction Fine-tuning

Stage 1:
Preparing
Dataset

1) Dataset
downloaded
and formatted

2) Batching
the dataset

3) Creating
data loaders

0 Data loader wraps an iterable around the Dataset to enable easy access to the samples

↳ Efficiency purposes

Every batch has different number of tokens EPs because, for example in batch 1 going the sample with the most amount of tokens is 81, but for batch 2, the most amount of tokens is 26, thus token sizes can and will change in between batches.
