

⑧ Step 4: Loading a pretrained LLM

Stage 1 ✓
Preparing
Dataset

model starts from a knowledge base
state, instead of a random initialization

Stage 2!
Fine-tuning
LLM

4) Loading a pretrained LLM

5) Instruction
fine-tuning the
LLM

6) Inspecting
the model loss

↳ we will load GPT-2 (355M) model weights
~~✗~~ without fine-tuning, even if we load the weights from
GPT-2 (355M), or even GPT-2 (724M), the response will
not be coherent w/ out fine-tuning
